This instruction implements AFPD 21-2, Nonnuclear and Nuclear Munitions. It provides the single standard listing of aircraft configurations to be used within PACAF. This instruction is applicable to Air National Guard, Air Force Reserve, ROKAF, JASDF, Air Combat Command (ACC), and United States Air Forces in Europe (USAFE) units when under the operational control of PACAF components during wartime. Standard Conventional Loads (SCLs) are identified numerically and by aircraft type.

SUMMARY OF REVISIONS

This revision incorporates procedures formerly published as PACAFR 55-27. It also eliminates the requirement for separate SCLs for PACAF units, assigned units, and deployed units. In addition, previous unit specific, contingency, and deployment SCLs have been eliminated or incorporated into this instruction to focus on combat operations and simplify the air tasking order (ATO) process. Units deployed to the PACAF area of responsibility should expect to be tasked with the stated SCLs unless otherwise directed by the tasking agency.

Aircraft station loading will be at unit discretion based on the best available configuration to meet mission requirements. In addition, air-to-air munitions, fuzing, external fuel tanks, LANTIRN Pods, Data Link pods, HTS pods, ECM expendables, and EA pods will be at unit discretion unless specifically noted in the ATO. Finally, units should coordinate unique fuzing requirements with the tasking agency to ensure mission requirements are met.

Attachment 22—HELICOPTER CONFIGURATIONS - U.S. & KOREAN 53

1. Guidance. The following pages contain combat SCLs for all aircraft operating within the PACAF theater of operations and aircraft which could augment PACAF forces during wartime contingencies. The appropriate AOC will use these SCLs to generate the ATO. Deviations from tasked configurations must be coordinated and approved by the tasking agency. Prior to using combat configurations not listed in this instruction, weight and balance and stability must be checked in accordance with the aircraft Dash 5.

2. Exceptions. This instruction provides the basic guidance necessary to facilitate ATO development and distribution. With the concurrence of the tasking agency, unit mission planning cells (MPC) may change or augment these SCLs as necessary to meet mission requirements.

3. Classification. This instruction is unclassified and approved for release to any multi-national force participating as a US ally during contingency or combat operations within the PACAF area of responsibility.

4. Changes. Forward recommended changes, additions, or deletions to HQ PACAF/DOTW, 25 E Street STE I-232, Hickam AFB HI 96853-5426, Unclassified Fax: DSN 449-4843.

STEVEN R. POLK, Brig Gen, USAF
Director of Operations

NOTES:

1) Plan on the F-15E always being configured with LANTIRN Pods (Nav/TGT).

2) The 20MM gun should always be loaded with 500 rounds. The type and quantity of round is at unit discretion based on availability.

3) When tasked for GBU-15/AGM-130 missions, loading of the AN-AXQ14 is at unit discretion

4) Typical ECM expendable load is 120 Chaff / 24 Flares. The type and quantity of expendable is at unit discretion based on mission requirements.

5) Air to Air munitions may vary in quantity and type based on availability or mission requirements.

NOTES:

1) F-16 configurations should include an ECM pod to the maximum extent possible. Units will decide if the ECM pod is critical to mission accomplishment.

2) The 20MM gun will be loaded with 510 rounds. The type and quantity of round is at unit discretion based on availability.

3) When carrying LGBs, the F-16 should be configured with a LANTIRN targeting pod.

4) Typical ECM expendable load is 60 Chaff / 30 Flares. The type and quantity of expendable is at unit discretion based on mission requirements.

5) Air to Air munitions may vary in quantity and type based on availability or mission requirements.

6) Loading of the HTS pod is at unit discretion based on availability and mission requirements.

NOTES:

1) A-10 configurations should include an ECM pod to the maximum extent possible. Units will decide if the ECM pod is critical to mission accomplishment.

2) Typical ECM expendable load is 240 Chaff / 240 Flares. The type and quantity of expendable is at unit discretion based on availability.

3) Air to Air munitions may vary in quantity based on availability or mission requirements.
