

Converting a FormFlow Form to an Image

To create an image file of existing traditional forms, you will need:

- FormFlow Filler
- Adobe Acrobat (full package)
- Graphics software (optional)
- IMT Designer

1. Open the traditional form in FormFlow.
2. Print to Acrobat Distiller to create a *pdf* file.
3. Open the pdf file in Acrobat.
4. Save as type *bmp, jpg, png, or ras*.
5. Open a new IMT in Designer and apply the Template Image under Page properties to test for sizing.

Note: The image file may need to be resized with graphics software to approximately 960 x 1260 pixels to fit a portrait page orientation. Reverse the settings for landscape orientation.
