

## **IC 2004-1 to AFI 24-238, IN-TRANSIT VISIBILITY**

12 July 2004

### **SUMMARY OF REVISIONS**

This change modifies unit move cargo placarding and labeling requirements. It synchronizes ITV reporting time standards with the Defense Transportation Regulation (DTR).

★1.10.1. LOGMOD/LSA Placards will be used for equipment identification for cargo processing from deploying unit to the Cargo Deployment Function (CDF). The placards facilitate Joint Inspection (JI), in-check, and cargo marshalling for deployments, exercises and unit moves. At the CDF, the CMOS/GATES operators will produce DD Form 2775, Pallet Identifiers, and/or Military Shipping Labels prior to onward movement. These forms will be affixed to the cargo as required by the DTR and MIL-STD-129.

★2.7.1. The Air Force is committed to ITV principles and will provide timely/accurate data to support the war fighter. The timeliness and quality of ITV data flowed to GTN is as important to the warfighter as the actual cargo movement. The Air Force will provide data to GTN as required by the DTR.

★2.7.1.1. DELETED

★2.7.1.2. DELETED
