The OPR for this supplement is HQ AFRC/LGSP (MSgt Cheryl Gurley). This publication applies to AFRC Base Supply Accounts.

SUMMARY OF REVISIONS

This supplement renumbered and updated all paragraph to correspond to the basic manual. A bar (|) indicates revision or new material.

25.7.6. (Added) A deployable bench stock (DBS) will be a portion of a unit's everyday operating bench stock. It is co-mingled with existing day-to-day bench stocks in sufficient quantities to support one war-time bed-down location for a period of 60 days. This section provides procedures for the establishment and maintenance of a DBS.

25.7.6.1. (Added) Each unit with a wartime tasking will use the AFLMA-developed Consumable Readiness Spares Package software, **Chapter 26, Section N**, to determine the range and depth of assets, conduct annual reviews and document required adjustments. At no time will units have an MRSP authorization and a deployable bench stock detail for the same consumable asset.

25.7.6.2. (Added) Field Repairable assets (XF3 items), Hazmat, and oversized XB3 assets (that is, windshields) will be made part of the Mobility Readiness Spares Package and segregated into a separate segment.

25.7.6.3. (Added) Load DBS details using a unique series of detail numbers and shop code DB. All other standard load/issue criteria will apply.

25.7.6.4. (Added) Depending on monetary constraints, commanders have the option of requesting a 200 percent bench stock fill on the total deployable bench stock or individual bins, 30 days prior to deployment.

25.7.6.5. (Added) All other standard bench stock procedures will apply.

25.11.1.4.2. Thirty stockage days will be used to compute authorized quantities with the exception of all flying units with a wartime tasking, these units, will compute authorizations using 60 stockage days to support deployable bench stock.

25.21.1. The bench stock support section (BSSS) must ensure the bench stock consolidate organization and shop codes are loaded on the organization cost center record (OCCR) for bench stocks operating under the consolidated bench stock concept. Also, the BSSS must ensure the same is loaded for organizations that use a generic shop code (BS) for their bench stock.

JAMES E. SHERRARD III, Lt. General, USAF
Commander
