Supersedes AFMAN 23-110, Volume 2, Part 2,
Chapter 26/AFRC Sup 1,
16 November 1998

Pages: 2
Distribution: F

The OPR for this supplement is HQ AFRC/LGSP (MSgt Cheryl Gurley). This publication applies to AFRC Base Supply Accounts.

SUMMARY OF REVISIONS

This supplement renumbered and updated all paragraph to correspond to the basic manual. A bar (|) indicates new or revised material from the previous edition. It gives procedures for deployable bench stock, spare parts kits and chemical items storage.

26.8.2.1. COS ensures the accomplishment of a quarterly dated item review. Retain a copy of the spares listing used for the review until the next review.

26.8.4. (Added) Approval to store flammable or combustible items in the RSP requires the concurrence/ authorization of the local fire protection agency. Recommend storage in transportable bins or in the flammable storage facility, segregated from normal operating stock.

26.8.4.1. (Added) All units storing chemical items (FSCs 6810, 6820, 6840, and 6850) in a deployable kit will have the following protective clothing available during each deployment and transported with the kit. The following items are minimum essential when bases deploy chemical assets. Quantities are determined locally.

NOMENCLATURE

Rubber Chemical Glove

Rubber Lab Apron

Face Shield

Safety Goggles

Eyewash

Rubber Overshoes

26.8.4.2. (Added) Segregate RSP chemical items in the hazardous storage facility at home station until time for deployment. Maintain two sets of protective clothing for handling POS and kit assets.

26.8.5. (Added) The war readiness element (WRE) screens the Daily Document Register (DO4) for internal changes affecting WRM details (for example, TRICs, FCU, FIC, etc.).

26.9.4. (Added) Mated Item Management. Maintenance must mate and test some items to be sure of their suitability when deployed. Assets issued by maintenance for mating are controlled according to chapter 24.

26.14.1. (Added) Kit assets may be used to support all requirements for weapon systems when serviceable primary operating stocks (POS) are not available.

26.22.4. (Added) Temporary Mission Support Kits (TMSK). Assets in support of TMSK are only issued to TMSK details in preparation for and during actual deployment. Upon return from deployments, turn in TMSK assets to POS as soon as possible.

26.22.5. (Added) RSP/HPMSKs/PMSKs stored outside the direct control of the COS will always have the deployment indicator loaded. Set up local procedures to be sure accountability is maintained for these assets.

26.22.6. (Added) Units within AFRC authorized a readiness spares package (RSP) will not have a permanent mission support kit (PMSK).

26.23.1. Keep authorization disks until superseded by new authorizations.

26.26.2. WRE assigns the deployment indicator to the detail records of the deploying RSP at least 5 days before the scheduled deployment. If the deployment is short notice, assign the deployment indicator upon notification. In either case, perform an inventory of the RSP verifying stock number, location, and balances. The COS has the option to appoint the actual counting of property to personnel outside the Inventory Element.

26.45.3. **NOTE:** All AFRC units use the MAITS program for mobility bag management.

26.47.7. (Added) Do not turn-in excess mobility bag assets to stock without approval of HQ AFRC/LGSW. Report all standard excess mobility bag assets to HQ AFRC/LGSW for possible redistribution. Provide NSN, noun, and quantity.

JAMES E. SHERRARD III, Lt. General, USAF
